

5 *LOBELIA* PLANT NAMED 'LILAC CANDLES'

BOTANICAL CLASSIFICATION

Lobelia siphilitica.

10 VARIETY DENOMINATION

'Lilac Candles'.

BACKGROUND OF THE INVENTION

15 The present invention relates to a new and distinct *Lobelia siphilitica* and given the cultivar name 'Lilac Candles'. *Lobelia* is in the family *Lobeliaceae*. This new cultivar originated from several generations of open pollinations between select dwarf *Lobelia siphilitica*.

20 This plant is unique due to its combination of dwarf habit and congested heads of lilac-colored flowers. It is characterized by the following:

1. Dwarf habit.
2. Numerous lilac-colored flowers.
3. Strong, short flowering stems that don't fall over.

25

The new variety has been reproduced only by asexual propagation (cuttings and micropropagation). Each of the progeny exhibits identical characteristics to the original plant. Asexual propagation by division and micropropagation as done in Canby, Oregon, shows that the foregoing characteristics and distinctions come true to form and are

30 established and transmitted through succeeding propagations. The present invention has not been evaluated under all possible environmental conditions. The phenotype may vary with variations in environment without a change in the genotype of the plant.

5 BRIEF DESCRIPTION OF THE DRAWING

The drawing shows a two-year-old *Lobelia* 'Lilac Candles' growing in the trial fields in August in Canby, Oregon.

DETAILED PLANT DESCRIPTION

10 The following is a detailed description of the new *Lobelia* based on observations of a two-year-old specimen grown in the field in Canby, Oregon. The color descriptions are all based on the *Royal Horticultural Society Colour Chart*.

Botanical name: *Lobelia siphilitica*

15 Cultivar name: 'Lilac Candles'

Parentage: *Lobelia siphilitica* compact forms in Open Pollination.

Plant:

Type - Herbaceous perennial.
20 *Hardiness* - USDA Zones 4 to 9.
Size - 45 cm. wide and 40 cm. tall.
Form - Basal clump.

Leaf:

25 *Type* - Simple.
Shape - Obovate.
Arrangement - Rosette to alternate up flowering stem.
Blade length - 8.5 cm.
Blade width - 5.8 cm.
30 *Margins* - Irregularly serrate.
Apex - Obtuse to acute.
Base - Attenuate.
Texture - Smooth.
Aspect - Matte.

- 3 -

5 *Vestiture* - Sparsely pubescent.

Venation - Pinnate.

Petiole length - 4 to 7 cm.

Color - Topside - Green 137A.

Bottom - Closest to Green 138B.

10 Inflorescence:

Type - Terminal raceme.

Peduncle -

Height: 48 cm.

Diameter: 5 to 7 mm.

15 *Vestiture*: Glabrous to sparsely pubescent.

Color: Yellow Green 144A.

Pedicel -

Length: 0.5 cm.

Texture: Sparsely pubescent.

20 *Color*: Yellow Green 144B.

Flower number - 80 to 100 per raceme with secondary flowers later in the leaf axils.

Flower Bud:

25 *Size* - 3.7 cm. deep and 0.7 cm. wide.

Shape - Oblong. Tube-like on bottom 2/3 then constricted and top ovoid with an acute tip.

Color - Lavender. Violet Blue 91B.

30 Flower:

Type - Zygomorphic.

Shape - Bilabiate.

Size - 2.5 cm. deep and 1.8 cm. wide.

- 4 -

- 5 *Corolla* - Slit $\frac{3}{4}$ down on the upper side between the two upper lobes, upper lobes recurve and are 7 mm long and 4 mm wide. Lower three lobes close together and 1.4 cm long and 6 mm wide. Tube is 2 cm long and 0.5 cm wide.

Texture - Satiny.

- 10 *Color* - Lilac. Lavender. Violet Blue 91C.

Calyx - 5 deeply cut acuminate lobes, linear lanceolate, parted to corolla base.

Calyx lobe size - 2.7 cm deep and 2.5 mm wide at base.

Calyx color - Yellow Green 144A.

Pistil - 3.4 cm. long. Lilac 155A.

- 15 *Stamen number* - 5 in a column around the stigma.

Filament length - 1.7 cm.

Anther size before dehiscing - 0.5 cm.

Pollen color - White 155A.

Bloom period - July and August in Canby, Oregon.

- 20 *Fragrance* - None.

Fruit:

Number - 50 to 100 per raceme.

Shape - Ovoid.

- 25 *Size* - 2 mm wide and 4 mm long.

Type - Dehiscent capsule.

Color - Tan, Grey Brown 199D.

Seed:

- 30 *Size* - 0.5 mm.

Color - Black 202A.

Shape - Ovoid.

Fertility - Fertile.

5 Pest Resistance: No observed pest resistance.

Disease:

None observed on plant grown under commercial conditions in Canby, Oregon.

10

COMPARISONS TO SIMILAR *LOBELIA*

Compared to the species, *Lobelia siphilitica*, *Lobelia siphilitica* 'Lilac Candles' is much more compact and with many more flowers congested together on the flowering
15 stems. The flowers are lilac-colored rather than blue, there are also more flowering stems than usual.

Compared to *Lobelia siphilitica* compact forms used for the open pollination, this new variety is lilac-colored rather than blue, and has superior flower number.
